Product Test Report

Requirements/Specifications-Based System Level Test Cases

System-level testing is a critical phase of the software testing lifecycle, where the complete and integrated portfolio builder system is tested to ensure it meets the defined requirements and specifications. This process validates whether the system fulfills both functional and non-functional requirements, ensuring the system operates as intended under real-world conditions. Each test case outlines specific scenarios, steps, test data, and the expected versus actual results to evaluate the system comprehensively. Testing was conducted on the following modules-

- User Authentication
- Edit Profile
- Upload Media
- Choose Template
- Publish Portfolio
- Create Resume
- Job Match with AI
- Guest User
- Admin Module

A total of 48 test cases were executed across all modules. The testing process verified system functionality, usability, validation mechanisms, and access control requirements.

Several defects were identified during testing, including issues related to portfolio publishing, template updates, resume downloads, and AI job matching. All identified defects were resolved and successfully re-tested.

Table 1: System Level Requirements

Requirement ID	Requirement Statement	Must/Want	Comment
R-Des-01	User can register / login	Must	N/A
R-Des-02	Users can edit/manage information	Must	N/A
R-Des-03	Users can upload media	Must	N/A
R-Des-04	User can choose templates	Must	N/A
R-Des-05	Users can publish/unpublish portfolio	Must	N/A
R-Des-06	Users can download Resume	Must	N/A
R-Des-07	User can find jobs matched with his skills	Want	N/A
R-Des-08	Admin can manage users/templates	Must	N/A
R-Des-09	Guest users can view demo templates	Must	N/A

Defect Summary Report

During system-level testing of the Dynamic Portfolio Builder, several defects were identified in different modules. These defects affected functionality and user experience. The detected issues were fixed and re-tested successfully before final validation.

Defect ID	Module	Defect Description	Severity	Status
D-01	User Authentication	System allowed registration/login using the same email multiple times, causing duplicate account issues	High	Fixed
D-02	Choose Templates	Selected templates were not updating correctly after changes	Medium	Fixed
D-03	Guest Users	Demo templates showed display/rendering issues for guest users	Medium	Fixed
D-04	Publish Portfolio	Published portfolio link generated errors and did not redirect properly	High	Fixed
D-05	Publish Portfolio	Published portfolio link was inaccessible after publishing	High	Fixed
D-06	Download Resume	Resume download failed when users attempted repeated downloads multiple times	Medium	Fixed
D-07	Job Match with AI	Job recommendations were not updating after changing user skills	High	Fixed
D-08	Job Match with AI	Live job listings were not displayed correctly in the AI job matching system	High	Fixed

Traceability of Test Cases to Use Cases

Traceability ensures that each test case is directly mapped to its corresponding use case and requirement, providing comprehensive coverage of the system's functional requirements. Below is the traceability matrix for the Portfolio Builder project:
